Volume 32, No. 8, page 3025: The following additional Figure should be placed on the upper part of this page:

YM182832

YM185453

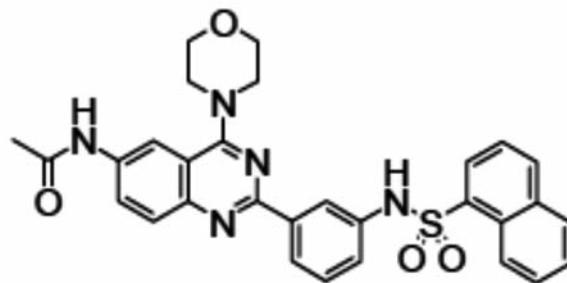

Figure 10. Chemical structures of PI702 (YM182832) and PI701 (YM185453).

Volume 31, No. 1, page 191: The name of the fourth author should read:

SOTIRIOS K. SOTIRIOU

Retraction

The article entitled: “EGFR and P-GP Expression in Oropharyngeal Mucosa in Relation to Smoking” by Philipp Baumeister, Melanie Märte, Maximilian Reiter, Christian Welz, Sabina Schwenk-Zieger and Ulrich Harréus, published in Anticancer Research 32: 1639-1648 (2012).

This action was requested by the authors, who stated: “Recent studies could not reproduce the pattern of immunohistochemical staining of P-GP in freshly biopsied oropharyngeal mocosa, neither using the same primary antibody that was applied before, nor using a different primary antibody. Furthermore, re-evaluation of the previous sections showed substantially diminished staining intensity. Faded staining possibly indicates that in the published experiments an actual antigen-antibody-reaction might not have been present. Thus, we suggest that P-GP expression was potentially not quantified in a correct way. The published results should therefore not be interpreted. The authors would like to extend their apologies to the scientific community”.
